## DETAILED ACTION

### ***Allowable Subject Matter***

Claims 1-4, 7-17 & 20-28 are allowed.

The following is an examiner's statement of reasons for allowance:

Referring to claim 1, the Elliott et al reference (US Patent 5,727,066) discloses speaker characteristic compensation method, for input signals to the speakers, a process of reducing crosstalk that (fig. 2), occurs between the speakers: a first direct processing step of processing an input signal to be a direct component to the other speaker (fig. 2: C11); a first cross processing step of processing an input signal to the one speaker (fig. 2: C21); a first addition step of adding respective signals obtained through the first direct processing step and the first cross processing step (fig. 2); a second direct processing step of processing an input signal to be a direct component to the one a second cross processing step of processing an input signal to the other speaker (fig. 2: C22), thereby obtaining a cross component to the one speaker (fig. 2: C12); and a second addition step of adding respective signals obtained through the second direct processing step and the second cross processing step (fig. 2); wherein the first direct processing step is based on a transfer characteristic through, which a driving signal for driving the one speaker is transformed by at least an amplifier characteristic or a speaker characteristic and emitted from the one speaker (fig. 2: col. 4, lines 54-61); the second direct processing step is based on a transfer characteristic through which a driving signal for driving the other speaker is transformed by at least an amplifier characteristic or a speaker characteristic and emitted from the other speaker

*(fig. 2; col. 4, lines 54-61)*. The Elliott et al reference taken alone or in combination with another reference does not disclose or fairly suggest a speaker characteristic compensation method where the first cross processing step is based on a transfer characteristic through which a driving signal for driving the one speaker is transformed by an inner case acoustic, and the second cross processing step is based on a transfer characteristic through which a driving signal for driving the other speaker is transformed by an inner case acoustic coupling and emitted from the one speaker as recited in independent claim 1.

Claims 14 & 27-28 are allowable for the same reasons stated above.

Claims 2-4 & 7-13 depend on claim 1. Claims 15-17 & 20-26 depend on claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
